

Computers – they're everywhere!

Computers are the wave of the present, past and future, and as we use them more and more, the need to gain an understanding of computers grows. Whether you work as a computer engineer, or as a chef at Chez Gilbert, you are most likely in some way or another connected with computers. They help run banks, businesses, libraries and even our personal lives.

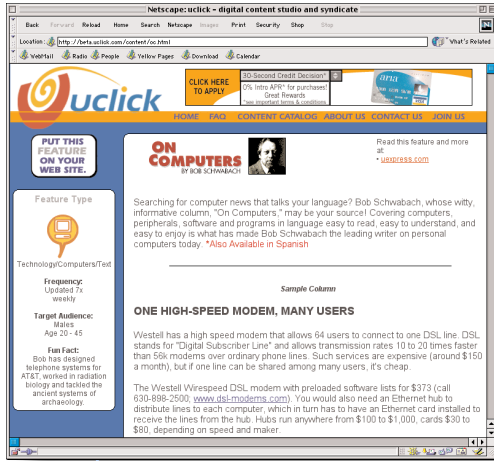

Bob Schwabach adds a human touch to the cyber world with ON COMPUTERS. His column addresses computer users' issues, from problems with virus scanners, to interesting Web sites that you may want to check out. He writes in an accessible style and each column provides the reader with valuable advice without forgetting that not every user was educated in computer science. Readers will be grateful for the hints that keep things running more smoothly in the realms of software, memory, hardware and the Internet.

There is no better column than ON COMPUTERS for simple, helpful and interesting tips on everyone's favorite toolbox, the computer.

About the Creator:

Covering computers, peripherals, software and programs in language easy to read, easy to understand, and easy to enjoy is what has made Bob Schwabach the leading writer on personal computers today.

A newspaperman for 16 years, Schwabach also trained as a mathematician. He has designed telephone systems for AT&T, worked in radiation biology and tackled the ancient systems of archaeology. His writing is included in the newly published "Digital Deli" and he is completing a book for Dow Jones on investment software for personal computers.
